BNP PARIBAS INDICES
INDEX METHODOLOGY SUPPLEMENT
BNP Paribas Long Gilt 10Y Rolling Future Index

Final Version dated 21st September 2017, amending and restating all previous versions

© BNP Paribas. All rights reserved.

This document (the “**BNP Paribas Index Methodology Supplement**”) supplements, forms a part of and is subject to the BNP Paribas Index Handbook dated November 20, 2015 (the “**Handbook**”), as may be amended, supplemented, replaced or superseded from time to time. The Handbook and the BNP Paribas Index Methodology Supplement together comprise the “**BNP Paribas Index Rules**” for the BNP Paribas Index described herein. In the event of an inconsistency between the Handbook and this BNP Paribas Index Methodology Supplement, this BNP Paribas Index Methodology Supplement will govern. Terms used herein, but not defined, bear the meaning set forth in the Handbook.

The BNP Paribas Index Rules will be made available upon request and, if applicable, subject to confidentiality or other agreements between BNP Paribas and the relevant party. Any information provided with respect to a BNP Paribas Index or the BNP Paribas Index Rules is provided on a confidential basis and solely for information purposes. By accepting a copy of the BNP Paribas Index Rules, you agree that you will not disclose, reproduce, redistribute or transmit, in whole or part, the BNP Paribas Index Rules without the written consent of the Index Sponsor.

BNP Paribas reserves the right to amend or adjust the BNP Paribas Index Rules from time to time and accepts no liability for any such amendment or adjustment.

Nothing contained in the BNP Paribas Index Rules should be construed as an offer or solicitation of any transaction.

Description of the BNP Paribas Long Gilt 10Y Rolling Future Index

The objective of the BNP Paribas Long Gilt 10Y Rolling Future Index (the “**BNP Paribas Index**”) and the strategy and methodology related thereto (the “**BNP Paribas Index Methodology**”) is to synthetically replicate an investment that provides continuous exposure to the most actively traded Long Gilt Futures Contract, without taking physical delivery of gilts. The BNP Paribas Index generally replicates an investment in the Long Gilt Futures Contract with the nearest Contract Month (as defined below) for which the First Notice Date (as defined below) has not occurred (the “**First Near Futures Contract**”). In order to avoid taking physical delivery of gilts, the BNP Paribas Index Methodology implements a process prior to the First Notice Date of the First Near Futures Contract by which such futures contract is replaced by the futures contract with the next following quarterly Contract Month. The BNP Paribas Index Level is intended to reflect the performance of the BNP Paribas Index Components based on their daily settlement price as provided by the ICE Futures Europe (the “**ICE**” or the “**Exchange**”).

During a specified period (the “**Roll Period**”) prior to the First Notice Date of the First Near Futures Contract, the BNP Paribas Index Methodology replicates the sale of the expiring First Near Futures Contract and the purchase of the Long Gilt Futures Contract with the next quarterly expiration date (the “**Second Near Futures Contract**”). This process (the “**Roll Process**”) is implemented by calculating the spread between the First Near Futures Contract and the Second Near Futures Contract (the “**Calendar Spread**”) in the calculation of the BNP Paribas Index during the Roll Period. The Roll Process for the BNP Paribas Index occurs during each calendar quarter based on the contract months of the Long Gilt Futures Contract, and is detailed in this BNP Paribas Index Methodology Supplement.

The BNP Paribas Index Level does not take into account any cash or other related returns that would be generated by actual investments in the BNP Paribas Index Components.

Version Control:

This BNP Paribas Index Methodology Supplement was amended on 21 September 2017. The following change was made to the following Section:

1. In the definition of “Roll Period Start Date” in the Section entitled “*BNP Paribas Index Methodology*”, the date “28th September” was replaced with “5th October”, as follows:

““Roll Period Start Date” means:

in respect of the Last Trade Dates for the BNP Paribas Index Component which fell on or prior to 5th October 2017, the Monday falling on, or prior to, the 3rd Scheduled Trading Day preceding such Last Trade Date; provided, however, that if that Monday is not a Scheduled Trading Day, the Roll Period Start Date shall be the next following Scheduled Trading Day immediately following such Monday.

In respect of a Last Trade Date for the BNP Paribas Index Component which falls after 5th October 2017, the 2nd Scheduled Trading Day preceding such Last Trade Date.”

BNP Paribas Index Components

The BNP Paribas Index is comprised of a synthetic portfolio of assets. There is no actual portfolio of assets to which any person is entitled or has any ownership interest. The BNP Paribas Index does not entail the actual execution of any transactions with respect to the BNP Paribas Index Components. The BNP Paribas Index Methodology synthetically replicates all of the referenced BNP Paribas Index Components and transactions.

The BNP Paribas Index Components that comprise the BNP Paribas Index are Long Gilt Futures Contracts. The Long Gilt Futures Contracts are traded and quoted on the ICE.

In general, a futures contract is a standardized contract to buy or sell an underlying asset at an agreed-upon price at the expiration of the contract. Futures contracts are traded and quoted on one or more public exchanges, subject to rules as specified by the relevant exchange. Futures contracts may have physical or cash settlement, depending on the reference asset, and are standardized in notional size and term.

The ICE lists Long Gilt Futures Contracts for delivery in March, June, September or December of each year (the quarterly month associated with a given futures contract, the contract’s “**Contract Month**”), by which the seller must make delivery to a buyer of physical gilts that meet certain delivery grade requirements, as specified by the Exchange (“**Eligible Bonds**”). Unlike most futures contracts which require delivery on a specific date, the rules of the Long Gilt Futures Contract allow the seller to make this delivery on any day on which the Exchange is scheduled to determine a settlement price for Gilt Futures Contracts during the Contract Month (the day thereby selected by the seller being the “**Delivery Date**”) by notifying the Exchange of its intent to do so. The Exchange then selects a buyer who is obligated to take delivery of the Eligible Bonds on the Delivery Date once they have been notified by the Exchange on the “**Notice Date**”, which is the second Scheduled Trading Day immediately preceding the relevant Delivery Date. As a result, an investor with a long position as early as the Notice Date for the first Delivery Date of a Long Gilt Futures Contract (the relevant contract’s “**First Notice Date**”) may be obligated to take physical delivery.

The Long Gilt Futures Contract is traded and quoted on the ICE under Bloomberg Comdty ticker “G” followed by a space, the Contract Month code (“H” for March, “M” for June, “U” for September and “Z” for December) and the last digit of the expiration year. For example, the Long Gilt Futures Contract expiring in December 2016 has the ticker symbol “G Z6”. The notional value of one such contract on any day is 100,000 pounds sterling.

More information about the BNP Paribas Index Component is available at <https://www.theice.com/products/37650336/Long-Gilt-Future>.

The prices of the BNP Paribas Index Components used to calculate the BNP Paribas Index Level on each BNP Paribas Index Level Calculation Date are determined based on the daily settlement price provided by the Exchange for each BNP Paribas Index Component on such day.

This document dated 21st September 2017 supersedes the previous rulebook (the “**Rulebook**”) for the BNP Paribas Index described herein. In addition, certain terminology and language previously used in the Rulebook has been updated to ensure that it is aligned with the terminology and language used in the Handbook.

BNP Paribas Index Methodology

The following describes the composition of the BNP Paribas Index in greater detail and the methodology used by the BNP Paribas Index.

BNP Paribas Index:	BNP Paribas Long Gilt 10Y Rolling Future Index (Bloomberg Ticker: BNSXFGG Index)
BNP Paribas Index Status:	Public Index
BNP Paribas Index Family:	Fixed Exposure
Index Sponsor:	BNP Paribas
Index Calculation Agent:	Solactive AG Unless otherwise indicated, all calculations and determinations set forth in this BNP Paribas Index Methodology Supplement are performed by the Index Calculation Agent.
BNP Paribas Index Launch Date	5 November 2013
BNP Paribas Index Start Date	4 January 1999
BNP Paribas Index Currency:	GBP
BNP Paribas Index Composition	
BNP Paribas Index Components:	As described in Table 1 – BNP Paribas Index Components
BNP Paribas Index Reference Rates:	Not Applicable
BNP Paribas Index Component Weighting Determination Dates:	Not Applicable
BNP Paribas Index Features	
Return Type:	Excess Return
Rebalancing:	Not Applicable
BNP Paribas Index Costs:	Not Applicable

Currency Conversion Mechanism:	Not Applicable
Volatility Control Mechanism:	Not Applicable
Calculation and Publication of the BNP Paribas Index Level:	
Initial BNP Paribas Index Level:	100, as of the BNP Paribas Index Start Date. Hypothetical backtesting is used to determine levels of the BNP Paribas Index for the period starting from the BNP Paribas Index Start Date, up to and including the BNP Paribas Index Launch Date, as described in Section 3 “ <i>Backtesting and Historical Data</i> ” of the Handbook.
Frequency of calculation of BNP Paribas Index Level:	Each Scheduled Trading Day
BNP Paribas Index Publication Dates:	Each BNP Paribas Index Level Calculation Date
BNP Paribas Index Publication Page:	Bloomberg: BNSXFGG Index
Website where level and current composition of the BNP Paribas Index is published:	Not Applicable
Price Disrupted Days Please see Section 4.3 “ <i>Price Disrupted Days</i> ” of the Handbook.	
BNP Paribas Index Adjustment Events: Please see Section 5 “ <i>BNP Paribas Index Adjustment Events and Consequences</i> ” of the Handbook.	
BNP Paribas Index Potential Adjustment Events: Please see Section 6 “ <i>BNP Paribas Index Potential Adjustment Events and Consequences</i> ” of the Handbook.	
Technical Annexes applicable to the BNP Paribas Index: Not applicable.	
Dates: “ Roll Day ” means each Scheduled Trading Day during the Roll Period. “ Roll Period ” means the period from, and excluding, the Roll Period Start Date calculated in respect of a First Notice Date to, and including, such First Notice Date. “ Roll Period Start Date ” means:	

- in respect of the First Notice Dates for the BNP Paribas Index Component which fell on or prior to 5th October 2017, the Monday falling on, or prior to, the 3rd Scheduled Trading Day preceding such First Notice Date, provided, however, that if that Monday is not a Scheduled Trading Day, the Roll Period Start Date shall be the next following Scheduled Trading Day; and
- in respect of a First Notice Date for the BNP Paribas Index Component which falls on or after 5th October 2017: the 2nd Scheduled Trading Day preceding such First Notice Date.

“First Notice Date” means the last Scheduled Trading Day of the calendar month immediately preceding the Contract Month of the First Near Futures Contract.

Annex 1

The BNP Paribas Index Methodology for the BNP Paribas Long Gilt 10Y Rolling Future Index:

BNP Paribas Index Level Calculation:

On each BNP Paribas Index Level Calculation Date t , the BNP Paribas Index Level ($Index_t$) shall be determined in accordance with the following formulae:

As of the BNP Paribas Index Start Date ($t = 0$):

$$Index_0 = 100$$

On each BNP Paribas Index Level Calculation Date t following the BNP Paribas Index Start Date:

- (i) For each BNP Paribas Index Level Calculation Date t that is not a Roll Day:
 - a. if BNP Paribas Index Level Calculation Date $t - 1$ is not a Last Trade Date for the BNP Paribas Index Component:

$$Index_t = Index_{t-1} \times \frac{DCP1_t}{DCP1_{t-1}}; \text{ or}$$
 - b. if BNP Paribas Index Level Calculation Date $t - 1$ is the Last Trade Date for the BNP Paribas Index Component:

$$Index_t = Index_{t-1} \times \frac{DCP1_t}{DCP2_{t-1}}$$

- (ii) For each BNP Paribas Index Level Calculation Date t that is a Roll Day:

$$Index_t = Index_{t-1} \times \frac{DCP2_t}{DCP2_{t-1}}$$

Where:

- t means the BNP Paribas Index Level Calculation Date
- $t - 1$ means the BNP Paribas Index Level Calculation Date immediately preceding BNP Paribas Index Level Calculation Date t
- DCP_t means the Daily Contract Price, which is the Settlement Price for the BNP Paribas Index Component on BNP Paribas Index Level Calculation Date t .
- $DCP1_t$ means the DCP_t for the First Near Futures Contract $FQ1_t$
- $DCP2_t$ means the DCP_t for the Second Near Futures Contract $FQ2_t$
- $FQ1_t$ means the First Near Futures Contract. On any BNP Paribas Index Level Calculation Date t , $FQ1_t$ shall be the Long Gilt Futures Contract with the then nearest First Notice Date.

$FQ2_t$ means the Second Near Futures Contract. On any BNP Paribas Index Level Calculation Date t , $FQ2_t$ shall be the Long Gilt Futures Contract with the First Notice Date immediately following that of $FQ1_t$.
