Source: Bloomberg, WisdomTree. All data are as of 21 September 2021. CFTC net positionings as at 14 September 2021. 1) Net Position Flows and Net Position AUM are calculated by multiplying the AUM/Flow in a given ETP by the leverage of that ETP. 2) All Performances are calculated on excess return indices. Closing Price are those of the Front Month Future in USD. Data about all indices can be found in Page 11 and 12. MACD stands for Moving Average Convergence Divergence. **Historical performance is not an indication of future performance and any investments may go down in value.**

For Discount to NAVs and Bid Offer Spread Analysis, we consider the 5 largest ETPs in their Asset Class/Asset for US domiciled and Europe domiciled.

Net Position AUM is the sum of the AUM in each ETP multiplied by its leverage factor (which may be either negative or positive). A negative figure indicates investors are net short.

Net Position Flow is the change in the Net Position AUM that is not due to price changes and indicates whether investors are bullish (net long) or bearish (net short) after taking leverage factor into account.

Dictionary of some abbreviations

Last 1D	Last 1 Day
Last 1W	Last 1 Week
Last 1M	Last 1 Month
Δ1D	Change in value over the last day
Δ1W	Change in value over the last week
Δ1M	Change in value over the last month
Δyear to Date	Change in value since the end of last year

Closing Price For Equity Indices as the last available Close Price of the index at the as of date
For Futures, it is the settlement price of the future for the as of date
